· US Citizen · Available Immediately

Full-stack engineer who builds and ships real products end-to-end — from React frontends and REST/GraphQL APIs to PostgreSQL backends, auth systems, and CI/CD deployments. Experienced working independently across the full stack with minimal oversight, owning features from design through production. Background in enterprise-scale data engineering at Jefferies Group and direct client product delivery through Creative Shore LI. Comfortable in fast-moving environments, remote workflows, and communicating clearly across technical and non-technical stakeholders.

TECHNICAL SKILLS

Frontend React, TypeScript / JavaScript, HTML/CSS, React Native · Electron, Chrome Extensions (MV3)

Backend & APIs Node.js, REST APIs, GraphQL, Python, Java · JWT / OAuth2, Stripe, third-party SDK integration

Databases PostgreSQL, SQL, Supabase · Firebase, real-time subscriptions, row-level security, data pipelines

Cloud & DevOps AWS, Azure, Docker, Vercel, GitHub Actions / CI-CD · Unix/Linux, Git, Airflow, Spark

Workflow Agile, async remote collaboration, technical documentation, code review, independent ownership

EXPERIENCE

Founder & Full-Stack Engineer · Creative Shore LI · Remote · Freelance *2025 – Present*

- Built and delivered full-stack web products independently — React frontends, REST API and third-party integrations, responsive UX from design specs, and CI/CD deployment via Vercel and GitHub Actions.
- Managed full project ownership across multiple concurrent clients — scoping, architecture decisions, feature development, testing, and post-launch iteration.
- Integrated payment gateways (Stripe), auth flows (Supabase/OAuth2), and external APIs into production-ready products; troubleshoot live integration issues independently.

IT Analyst Intern — Data & Backend Engineering · Jefferies Group · New York, NY (Hybrid) *Sept 2023 – Feb 2024*

- Built and maintained enterprise-scale real-time data pipeline infrastructure in Python and SQL — increasing operational productivity by 50% and platform reliability by 92%.
- Executed 15+ weekly database and server integrations to validate data flow before production release; maintained technical documentation for architecture and deployment procedures.
- Troubleshoot production system failures independently in a high-availability, time-sensitive financial environment.

Bookseller & Associate Trainer · Barnes & Noble · Bay Shore, NY *Nov 2020 – Present*

- Onboarded and mentored 10+ new associates weekly; praised consistently for clear communication, reliability, and cross-team coordination.

PROJECTS

Care Circle — Family Caregiving Coordination App — [Node.js](#) · [JavaScript](#) · [CSS](#) · [PWA](#) · [Server-Sent Events](#)

- Built a full-featured caregiving coordination web app for families managing elder care — covering task delegation, medication tracking, appointment scheduling, shared notes, document records, insurance call logs, and a real-time family group chat.
- Implemented real-time local workspace syncing using Server-Sent Events (SSE) and a lightweight Node.js server, enabling live multi-user updates without a cloud database dependency.
- Shipped as a Progressive Web App (PWA) with service worker, web manifest, light/dark mode, and fully responsive mobile and desktop layouts.
- Included a care packet PDF export feature and custom confirmation modals — designed with a warm, accessible UI for users of all ages.

Prism — Multi-Surface AI Application — [Electron](#) · [Chrome MV3](#) · [Service Workers](#) · [REST API](#)

- Shipped across 3 independent surfaces — web, Electron desktop app, and Chrome MV3 Extension. Debugged live CSP violations, off-screen rendering bugs, and service worker lifecycle issues.

Solace — Full-Stack React Mobile App — [React](#) · [Supabase](#) · [PostgreSQL](#) · [Claude API](#) · [OAuth2](#)

- Built a full-stack React mobile app with real-time data, Supabase auth (JWT/OAuth2), row-level security, social features, mood analytics dashboard, and AI-powered chat. Resolved live CORS, auth flow, and API integration bugs.

[Obsession Studio — Luxury Med Spa Client Website](#) — *HTML · CSS · JavaScript*

- Designed and built a full marketing website for a Bay Shore luxury skin spa — featuring a full-screen video hero, multi-section layout, treatment showcase, testimonial slider, and a multi-field contact form with radio inputs and service selection.
- Delivered a brand-forward, responsive UI with smooth animations, custom navigation with a dropdown treatments menu, and a light/dark color scheme system — built as a Creative Shore LI client deliverable.

[DNS Connectivity Case Study — Infrastructure Diagnostics Portfolio](#) — *PowerShell · Bash · GitHub*

- Designed and documented an end-to-end DNS troubleshooting framework to diagnose resolution failures, resolver performance degradation, and network path issues using command-line tools including ping, nslookup, and dig.
- Automated DNS test workflows to isolate faults between local resolver caches, ISP DNS servers, and public endpoints — with structured documentation enabling rapid root-cause detection and reproducible diagnostic steps.
